

Input voltage	Output voltage	Output current	Output power	Efficiency	Size
10-20V DC	48V DC	4 Amps	192 Watts	95.2%	74*74*32mm

The WG-12S4804 is a Non-isolated DC-DC converter that uses a synchronous rectification technology, and features high efficiency and power density. It has the dimensions of 74mm x 74mm x 32mm (2.91 in. x 2.91 in. x 1.26 in) and provides the rated output voltage of 48V and the maximum output current of 4A.

# Peatures

- Design meeting RoHS / CE
- High efficiency: 95.2% (@ 12Vin, 25℃)
- Import capacitors, high reliability
- Non-isolated between input and output
- Support -40 °C environment
- 100% full load burn-in test
- Over load, Low voltage protections
- Die-cast aluminum shell, epoxy potting
- Waterproof level IP68
- 1 Year warranty

# Model naming method

# WG-12S4804

# Applications

- Industrial
- Alternative Energy
- Golf Cart
- Forklift
- Electromotor
- Telecommunications
- Boat & Yacht
- RVs/EV
- LED Marketplaces and so on.
- WG: "szwengao" company name
  - 12 : Input voltage
  - **S** : Single output type
  - 48 : Output voltage
  - 04 : Output current

#### Wiring Instructions

The input and output of this product is terminals. The user should ensure that the input and output wires and terminals are connected reliably, and pay attention to the wire diameter to meet the requirements of the power supply current. If the cable to be used is long, it needs Considering the voltage drop of the wire, if the voltage drop is too large, the voltage output at the load end may not meet the load demand. In this case, consider using a thicker wire diameter or reducing the length of the wire. Generally, if long wiring is required. Long line should be used on the side where the current is relatively small. For example, this product is a step-down product, so long lines should be used on the input side.

#### Input Undervoltage Protection

The converter will shut down after the input voltage drops below the under-voltage protection threshold for shutdown. The converter will start to work again after the input voltage reaches the input under voltage protection threshold for startup. For the Hysteresis, see the Protection characteristics.

#### **Output Overcurrent Protection**

The converter equipped with current limiting circuitry can provide protection from an output overload or short circuit condition. If the output current exceeds the output overcurrent protection set point, the converter enters hiccup mode. When the fault condition is removed, the converter will automatically restart.

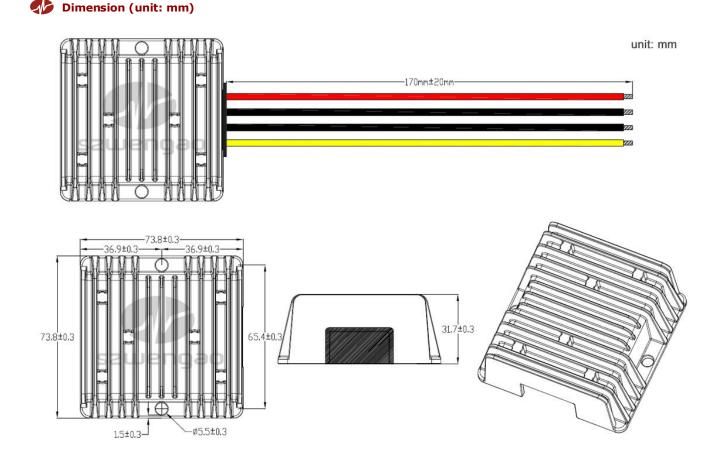

## **Thermal Consideration**

Sufficient airflow should be provided to help ensure reliable operating of the WG-12S4804

Therefore, thermal components are mounted on the top surface of the WG-12S4804 to dissipate heat to the surrounding environment by conduction, convection, and radiation. Proper airflow can be verified by measuring the temperature at the middle of the base plate.
